User Manual

The system usage is clear and straight forward in general.
A user should be able to find his way without this manual.

But just to be sure let us explain the way that tables and their data are read, as that might be a bit unclear at first sight.

When a table is shown, the table name and columns are displayed in the topmost frame.
In the example below we have 3 columns: id, Role and Username.

In the next frames we have the records/rows. Every row delimits the columns with commas after each string. So, the column 'id' in the picture below, contains the data 'AdvisorID:1'. Then column 'Role' contains the data 'Advisor', and the last column 'Username' contains 'kerem150.

The squiggly lines in this table are only significant to provide clarity for the reader by grouping the different roles in a frame.

The end of a row is indicated by the text ' | END OF ROW | '
